

About the Authors

David L. Oppenheimer is a graduate student at the University of California, Berkeley, with interests in operating systems, computer security, and parallel and distributed computing. He graduated from Princeton University in 1996 with a BSE degree in electrical engineering.

David A. Wagner is a graduate student at the University of California, Berkeley, with interests in computer security and cryptography. He graduated from Princeton University in 1995 with an AB degree in mathematics.

Michele D. Crabb serves as senior computer security analyst at Cisco Systems Inc. where she manages security for the fast-growing Engineering Services Division. Prior to working for Cisco, Michele managed security for the Numerical Aerodynamic Simulation Division at NASA Ames Research Center. Michele has been actively involved in technical conferences for over six years, both as a presenter/tutorial instructor on UNIX security topics and as chairperson.
